

DISASTER MANAGEMENT

ACT 2005

Institutional & Financial Mechanism & National Policy on Disaster
Management – A Comprehensive Educational Overview

EDUCATE

India's vast geographic diversity makes it vulnerable to a wide range of natural and man-made disasters. From earthquakes and floods to cyclones and industrial accidents, effective disaster management requires a robust legislative framework and institutional mechanisms. The Disaster Management Act 2005 established a comprehensive approach to disaster preparedness, response, and recovery across all levels of government.

INTRODUCTION

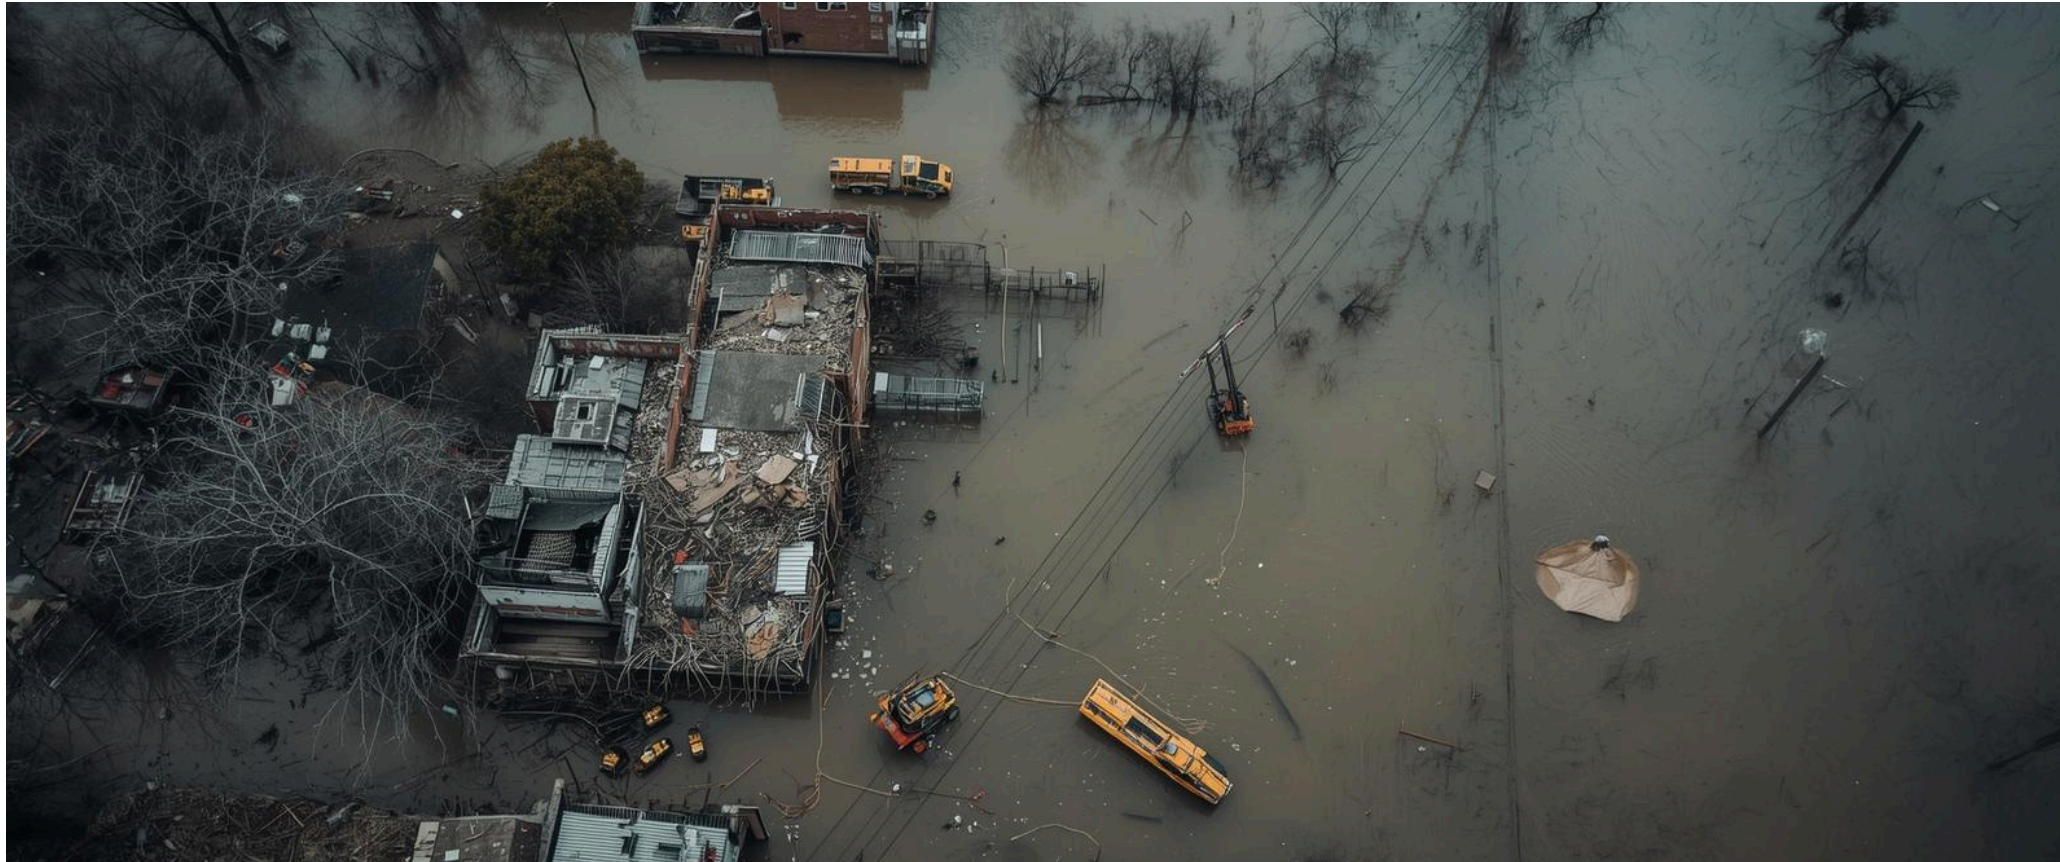

DM ACT 2005

DISASTER MANAGEMENT

Before the Disaster Management Act 2005, India lacked a unified legal and institutional framework for disaster response. The devastating Odisha Super Cyclone (1999) killed over 10,000 people, while the Gujarat Earthquake (2001) claimed 20,000 lives and caused massive destruction. These catastrophic events exposed critical gaps in coordination, preparedness, and response mechanisms across government levels.

The fragmented approach to disaster management necessitated a comprehensive, unified framework for effective coordination and response.

BACKGROUND & ≡

- 04 Establish a comprehensive institutional framework at the national, state, and district levels for effective disaster management, ensuring clear roles, responsibilities, and coordination mechanisms across all government tiers.
- 04 Ensure coordinated and timely disaster response through integrated planning, resource mobilization, and unified command structures that enable swift action during emergencies and minimize loss of life and property.
- 04 Build disaster-resilient communities through comprehensive preparedness programs, capacity building initiatives, public awareness campaigns, and promoting a culture of prevention and mitigation at grassroots levels.

OBJECTIVES OF THE DM ACT

NATIONAL LEVEL INSTITUTIONS

NDMA

The National Disaster Management Authority (NDMA) is the apex body for disaster management in India, chaired by the Prime Minister. It formulates policies, approves national plans, and coordinates enforcement of disaster management policies across the country. NDMA provides guidelines for state authorities and ensures a holistic, coordinated approach to disaster preparedness and response.

NDRF & NIDM

The National Disaster Response Force (NDRF) is a specialized force for disaster response, rescue, and relief operations during natural and man-made disasters. The National Institute of Disaster Management (NIDM) serves as the premier training and capacity building institution, conducting research, documentation, and developing training programs for disaster management professionals nationwide.

DM ACT 2005

DM ACT 2005

STATE & DISTRICT INSTITUTIONS

STATE LEVEL - SDMA

The State Disaster Management Authority (SDMA) is chaired by the Chief Minister. It formulates state disaster management policies, approves the State Plan, and coordinates with central authorities. The State Executive Committee, headed by the Chief Secretary, implements SDMA decisions and ensures preparedness across all departments.

DISTRICT LEVEL - DDMA

The District Disaster Management Authority (DDMA) is co-chaired by the District Collector and elected representative. It prepares the District Disaster Management Plan, coordinates response efforts, and ensures capacity building at the grassroots level. DDMA serves as the primary implementing agency for disaster response, conducting mock drills, maintaining resource inventories, and coordinating with local bodies and communities for effective disaster risk reduction.

DMACT 2005

FINANCIAL MECHANISM

- 01 The National Disaster Response Fund (NDRF) is maintained at the central level for emergency response to severe disasters. It is funded through budgetary allocations and receives contributions from various sources to ensure rapid deployment of resources during calamities.
- 02 State Disaster Response Fund (SDRF) is constituted by each state government. The Centre contributes 75% (90% for special category states) while states contribute the remaining share. This fund addresses immediate relief needs at the state level.
- 03 The National Disaster Mitigation Fund focuses on prevention and preparedness measures. Allocations support capacity building, early warning systems, infrastructure strengthening, and community resilience programs across vulnerable regions.

DM ACT 2005

Collaborative Disaster Management requires coordinated efforts from multiple stakeholders. Government agencies at central, state, and district levels lead policy formulation, resource allocation, and emergency response coordination. The private sector contributes through Corporate Social Responsibility initiatives, infrastructure support, and technological solutions. Media plays a crucial role in early warning dissemination and public awareness campaigns.

NGOs provide grassroots implementation, community mobilization, and humanitarian relief. Community organizations ensure local preparedness and resilient recovery.

GOVERNMENT AGENCIES

Lead Coordinators

NGOS & COMMUNITY

Ground Support

ROLE OF STAKEHOLDERS

- 01 The National Policy on Disaster Management 2009 adopts a holistic, proactive, and integrated approach. It encompasses all phases of disaster management including prevention, mitigation, preparedness, response, recovery, and rehabilitation.
- 02 A key vision is building a culture of prevention and preparedness at all levels. This involves community participation, capacity building, and awareness programs to ensure society is equipped to handle disasters effectively.
- 03 The policy emphasizes integrating disaster risk reduction into sustainable development planning. Development initiatives must incorporate disaster resilience to protect lives, livelihoods, and economic assets from future hazards.

NPDM VISION

NPDM 2009

KEY FEATURES OF NPDM

- 01** Mainstreaming Disaster Risk Reduction: Integrating DRR into all development planning processes, ensuring that disaster risk considerations are embedded in policies, programs, and projects across all sectors including infrastructure, housing, and urban planning.
- 02** Community-Based Disaster Preparedness: Empowering local communities through participatory approaches, establishing village-level disaster management committees, and developing community contingency plans that leverage indigenous knowledge and local resources.
- 03** Capacity Building & Awareness Programs: Systematic training of officials, emergency responders, and volunteers; public awareness campaigns; school safety programs; and establishing specialized training institutes for disaster management education.

INTEGRATION & CHALLENGES

KEY CHALLENGES

Despite robust frameworks, disaster management faces significant hurdles. Coordination between multiple agencies remains complex, with overlapping jurisdictions causing delays. Resource constraints limit preparedness and response capabilities, especially in rural areas. Climate change intensifies disaster frequency and severity, demanding adaptive strategies beyond current protocols.

INTEGRATION GAPS

Technology integration across all levels remains uneven, with many districts lacking early warning systems and real-time communication infrastructure. Public awareness gaps persist, as communities often lack knowledge of evacuation procedures and preparedness measures. Bridging these gaps requires sustained investment in capacity building and community engagement programs.
