### EDUCATION

#### SANJIVANI COLLEGE OF ENGINEERING

- August 2023 - 2027 (Pursuing)
- B.Tech in Computer Engineering

#### HIGHER SECONDARY CERTIFICATE K J SOMAIYA COLLEGE, KOPARGAON

- Completed : February2023
- Percentage : 74.5%

#### SECONDARY SCHOOL CERTIFICATE MONTFORT SCHOOL , SAVALIVIHIR

- Completed : March2021
- Percentage : 81.00%

### SKILLS

- Programming - Python, Bash, SQL, C++, C, Javascript, HTML, Java, NodeJs, CSS, Bootstrap, Tailwind
- Security Tools - Burpsuite, Nmap, Wireshark, Nessus, Metasploit, Hydra Computer Networking
- Cybersecurity Operating System - Linux (Kali, Ubuntu), Windows Others- DBMS, PowerBi
- OWASP Top 10 vulnerabilities

### OBJECTIVE

Seeking a Penetration Tester position to identify vulnerabilities and enhance security measures, ensuring robust protection against cyber threats .

### PROJECT

#### Firewall with Real-Time Threat Intelligence

To develop a free, open-source Web Application Firewall (WAF) that provides real-time monitoring, AI/ML-powered threat detection, automated mitigation, and multi-interface access (CLI, desktop, web) — essentially an open alternative to commercial solutions like Cloudflare, enabling organizations to self-host advanced security features.

#### Quantum Messaging System

To develop a post-quantum secure messaging system that integrates layered cryptography, ephemeral storage, and resilient offline-online communication. It ensures confidentiality, forward and backward secrecy, metadata protection, and scalable group messaging, delivering a privacy-first, user-friendly platform resistant to quantum and classical cryptographic threats.

#### OSINT Aggregation Platform

To design and develop a modern, high-performance OSINT aggregation platform that centralizes multiple intelligence-gathering modules into a single, intuitive interface. The platform empowers cybersecurity professionals, investigators, and researchers to efficiently collect, analyze, and visualize open-source intelligence across usernames, domains, images, and geolocation data. By leveraging React, Vite, TypeScript, Tailwind CSS, and Shadcn UI, the project aims to deliver a secure, scalable, and user-friendly solution that enhances investigative workflows while maintaining strict code quality and testing standards.
